   Lactadherin protein was found in exosomes produced by dendritic cells. The protein is inversed in the phase; tests of fatticulate artigens by dendritic cells. Exosomes produced by dendritic cells exposed to tumour antiqens induce potent immune responses. Lactadherin or variants of it may be used in the mediation of an immune response. Variants of lactadherin may be used to infibilities and/or stimulation of the cross priming of antiqens and stimulation of the phagocytosis of antiqens by dendritic cells. Compositions derived from lactadherin can also be used to monitor an immune response, more specifically a CTL (cytotexic T-lymphocyte) response and also to produce CTLs specific for a selected antigen. The present sequence is the human
  Chimeric isolated (human) lactadherin polypoptide that tunctions as an adaptor of cross-priming to eliminate pathogenic antigens, e.g. in

measuring haman gene expression in a sample derived from human foetal liver. The single exon nucleic acid probes may be used for predicting necasuring and displaying quart expression in samples derived from human fetal liver. The present sequence is a peptide encoded by a single exon nucleic acid probe of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from NIPO at the wipe int/published_pri_sequences.

The prosent sequence represents bomas will fat globale protein MFG-FB, which has bomology to the developmentally-regulated endothelial cell covers [Gerl B. The Del I protein has epidermal growth tactor (EGP) like demains and discould [Jacker VII] like domains. The Del-1 proteins have an inhibitory effect on anylogenesis (blood vessel growth), this activity may be useful elinically to present neowascularisation.
   tissues such as tumour nodules and prevention of metastasse. The anti-
anglopenic activity of Del 1 may be used to treat abnormal conditions
that result from anglopenesis, including cancer, diabetic retinopathy,
heumatoid arthrilis and endometriosis. Since Del 1 promotes
   anglogenesis it can be used to treat cardiac ischaemia, thrombotic stroke, wound healing and peripheral vascoiar disease, ixel-1 is also axeful for promoting bone tormation. Deli binds to alpha V beta 3 integrin, and is an apoptosis inducer.

Murine Del-1 (AAW10364) is the polypeptide product of the murine developmentally regulated endothelial cell locus-1 (del-1) qene (AAR7388). It shows 94% amino acid homology to the human Del-1) profein (AAW10365). Structurally, members of this novel qene family contain 3 EGF-like domains and 2 discoidin L/lactor VIII-like domains. Del 1 is expressed in endothelial and certain tumour cells. Its ability to inhibit vascular formation allows its used as an anti-anglogenic agent. It can be used as a tumour marker, to identify Del-1 binding pariners, and to modulate endothelial cell qrowth and blood vessel formation. Recombinant Del-1 can be produced in transformed host cells utilising vectors incorporating del-1 nucleic acids.
  New developmentally requiated endothelial cell locus-1 (del 1) gene - used to develop prods. for the diagnosis and treatment of cancer and conditions involving abnormal anglogenesis

This SWISS PROT entry is repyright. It is produced through a reliable tation between the Swiss Institute of Bioinformatics and the EMBL outstation -
  the European Bioinformatics Institute. There are no restrictions on its use b_i nor-field institutions as long as its centent is in to way modified and this statement is not removed. Usage by and for commercial entities requires a livense agreement (See http://www.istestic.oh/anneument)
   ..
Injumi B., Inkidashi B., Jakeda J., Inkemoto E., Ochaia E., Wada C., Yamaqata S., Horinoth T., Pornayata S., Horinoth T., "Construction of a contiguous 874-kb sequence of the Escherichia coli "Kiz genome corresponding to 50.0-68.8 min on the linkage map and anniysis of its sequence features.", Inna per 4.91-113(1997).

--- FUNCTION: PAPT OF THE BINDING-PROTEIN-DEPENDENT TRANSPORT SYSTEM
  Gaps
  ! SUBCELLULAR LUCATION: Integral membrane protein. Inner membrane

Pred. No. is the number of results predicted by chance to have a source greater than or equal to the source of the result being printed, and is derived by analysis of the total score distribution.

Lactadherin protein was found in exosomes produced by dendritic cells. The protein is invelved in the phanorytosis of particulate antideous by dendritic cells. Exosomes produced by dendritic cells exposed to tumour antiques induce potent immune responses. Lactadherin or variants of it may be used in the mediation of an immune response. Variants of

                                                                                                                                                   A complete cDNA sequence for the 46 kDa HMFC antiqen, a major component of the apical surface of the normal breast epithelial real, was obtained by PCR and RACE methods. cDNA clones can be used to prepare MAPs for ise in immunotherapy, immunohistopatheleay, proquosis, diagnosis, imaging and therapy. Recombinant antiqen can be expressed in prokarpetic or (4), cosylated) in cakarpetic cells.
used in assays to determine the presence of a cancerous tumour of epithelial origin, and in a vaccine against neoplastic tumours

Excessores produced by dendritic cells exposed to tument actigens induce prict immune response. Lartablerin or cariants of it may be used in the mediation of an immune response. Variants of lactablerin may be used for inhibition and/or stimulation of the phagocytosis of cross prinding of antiques and stimulation of the phagocytosis of antiques by dendritic cells. Compositions derived from lactablerin can antiques by dendritic cells.
lactadherin may be used for inhibition and/or stimulation of the cross-priming of antigens and stimulation of the phagocytosis of antigens by denditier rells. Compositions derived from lactadherin can also be used to monitor an inhume response, more specifically a Cit Cytotoxic T. Tymphocyte) response and also be preduced from selected antigen. The present sequence is the human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Chimeric isolated (human) lactadherin polypeptide that functions as an adaptor of cross-priming to eliminate pathogenic antigens, e.g. in

Class I was mutated by site directed mutagenesis. Transfected cells containing the mutant sequence may be generated. The heterologicus RFIV protein produced by those cells may be used as an immunogen to produce chicken MHC class specific antisera. This antisera may then be used to direction the BF heplotype of any chicken. BFIV specific antisera may the class is specific antisera. This antisera may then be used to determine the B haplotype of chickens with reduced cross reaction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Producing antisera specific to major histocompatibility complex (MHC) proteins in chickens involves administering transfected cells expressing heterologous chicken MHC class I protein capable of

(I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, obliquences, and for chromosome and gene mapping, and in recombinant production of (iI), the polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes (I) is useful in gene therapy techniques for estore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide the tissue, as molecular weight markets and as a food supplement (II) and its binding partners are useful in medical
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynomenthe sequences have applications in diagnostics, torens. 9, queen applied, identification of materiass responsible for genetic disorders or other traits to assess biodiscusity.
sequence may be generated. The Lateralogous BFTV protein produced by these cells may be used as an immanagen to produce edition mid-lass specific antisors. This subtisors may then be used to determine the BF haplotype of any thicken RFTV specific antisors may be used to determine the RFTV specific antisors may be used to determine the RFTV specific antisors may be used to determine the RFTV produced with reduced cross reaction with class I and alass IV MHC proteins. The present sequence is BFTVIZ class I MHC proteins. The present sequence is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Saps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated polynacted ide and encoded polyneptibles, useful in

and to produce other types of data and products dependent on PNA and amine acid seperates. ABCDDS10-MBCDD377 represent novel human diagrams is amine acid sequences of the invention of the human between the sequences. Between the product of the printed specification, but was obtained in clottonic format directly from WIPD at ILp.wipo.int/pub/pub/ished_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          presence or absence of F. aches in a patient complises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of beaud protein in the sample. The polypopuldes may be used as antigens in the production of antibodies specific for P. aches proteins. These antibodies can be used to

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequences AAU33135 AAU68017 represent Proposition associated DNA sequences are used in the treatment, prevention and diagnosis of medical conditions caused in the treatment, prevention and diagnosis of medical conditions caused by P. aones. The disorders include SAPIO syndrome (synovita), acus, pustulosis, hypertosis and osteomyelitis), aveitis and endophthalmitis F. arnes is also incolved in infections of bone, joints and the central nervous system, however it is particularly involved in the inflammatory lesions associated with acue vulgaris. A method for detecting the
downrequister expression and activity of Larines polymetribes and therefore treat Plannes inferious. The antibudies may also be used as diagnostic agents for determining a cornes presence, for example, by ensyme linked immunosorbent assay (BLISA).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formal directly from WIFO at 11p wipo.int/pub/published_pol_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SAPHO syndrome; synovitis; acne; pustulosis; hypertosis; osteomyelitis; uveitis; endopih hainitis; bone; joint, central nervous system; ELISA; inflammatory lesion; acte vulgaris; enzyme linked immunostrbust assay; dermatological; osteopathic; neuroprotectant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        presence or absence of P. acnes in a patient comprises contacting a sample with a binding agent that binds to the proteins of the invention and determining the amount of bound protein in the sample. The polypeptides may be used as antigens in the production of antibodies
                                                                                                                                                                                                                                                                                             edet: 'n

The invention is
                                                                           enzyme linked immunosorbent assay (ELISA).
Note: The sequence data for this patent did not form part of the printed
specification, but was obtained in electronic format directly from WIPO
eposition for f. actors proteins. These actibulies can be used to downcopiate expression and activity of P. across polypetides and therefore treat P. across identifiers. The antibulies may also be used as diagnostic agents for determining P. across presence, for example, by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The sequence data for this patent did not form part of the printed specification, but was obtained in electronic formal directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         genes from Drosophila and for elucidating cell signalling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to an isolated nucleic acid detection readent expable of detecting 1600 or more genes from the expaint the invention useful in developmental biology and in elucidating cell signalling and explicitly interactions in higher cobargodes for the development of insecticides, therapeuties alpha harmaceutical drugs. The invention discusses genomic bNA sequences (ARLIGITE ARLAGIT), expressed DNA sequences (ARLIGITE) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New isolated nucleic acid detection reagent for detecting 1000 or more
                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Drosophila; developmental biology; cell signalling; insecticide;

The Polynarleatides are also used in diagnostics as expressed sequence tays for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting a final stating a pelyperide in issue, as melecular weight markets and as a final supplement (II) and its binding partners are useful for treating angles expressing (II), and (II) are useful for treating disorders involving aberrant protein expression or biological activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The polypeptide and polymentertide sequences have applications in diagnostics, formains, year mapping, thattiflustion of antitions in responsible for quartic disorders or other traits to assess birdimensity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ttp.wipo.int/pub/published_per_sequences
                                                                                                                     Caps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       and to produce other types of data and products dependent in DNA and amino acid sequences. ARGU0010-ARGS0377 represent nevel human diagnostic amino acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   chromosome mapping, gene therapy, foreupping, propingly, forensic, upplement; medical imaging diagnostic, genetic diagnostic,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to haman polymered ides (AAL7754) AA5841) and the encoded protons (AAR894919) that exhibit activity elating to bytakines, or in profile or sell differentiation or which way induce production of other cytokines in other cell populations. The excites or pulymered or and perpendices are useful in spen. Cherty, vaccines or perfect the standard properties have carried expendices for original perpendices are useful in spen. Cherty, vaccines or perfect standard factor activity, hamanomediatory activity and activity, tissue growth factor activity, hamanomediatory activity and secondard activity and activity and activity and secondard activity and activity and secondard activity and secondard activity and activity and secondard activity and secondard activity and secondard activity and secondard activity and activity and activity and secondard activity and activity and secondard activity and activity and secondard activity and secondard activity and activity activities and activity activities.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, eyrobies, sell proliferation, sell differentiation, sene therapy) variaties peptuantapy stem cell growth factor; hashmatopolosis; lissee triad, factor, immanered tallating, same, leskachia; errors system disorders, arthritis, inflammation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The used to properly, itself or animal regard could not be proported to probe that it along the property of the proteins are stated. However, itself or also be used in allowing to proteins can also be used in allowing asymptoms associated with the discretes and in disquestic immunosystys e.g. redicinment assays to enough the proteins can also be used in allowing symptoms associated with the discretes and in disquestic immunosystys e.g. redicinment and arthritis.

Inked immunosothent assays (ELISA) Disorders which are diagnosed or treated inclined autonium diseases e.g. the underthanked and arthritis.

Inked immunosothent assays (ELISA) Disorders which are diagnosed or cardiovascular disorders e.g. to crebral isorders e.g. notice to a caused by bacteria, viruses and fungional coular disorders e.g. vortueal infertion. The polypertides can also be used to add wound healthy and epithelial cell proliferation, to prevent supporting cell culture of primary tissues, to regenerate tissues and in preservative to increase or decrease storage capabilities. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                encoding them. The secreted proteins can be expressed by standard recombinant methodology, the secreted proteins and polynucleotides are used to prevent, treat or amelionate a medical condition in e.g. humans,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The invention provides novel human secreted proteins and polymucleotides
                                                                                                                                                                                                                                                                                                                                                                                                      secreted protein, immunosuppressive, antiarthitic) antitheumatic, an iprollferntise, \gamma tostatis, cardian, vasatnefic, cerebroprotective, nootropic, neuroprotective, antibacterial, virucide, fungicide, human,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Birse CE, Suppet DR, Olsen HS,

The invention relates to isolated polynucleotide (1) and polynetase chain reaction (FCR) primers, objanes, and for chromosome and general interaction (FCR) primers, objanes, and for chromosome polynucleotides are also used in disquestics as expressed sequence tags for identifying expressed genes (1) is useful for identifying expressed genes (1) is useful for extore normal activity of (11) or to treat discose states involving to restore normal activity of (11) or to treat discose states involving qualitating a polynedial in tissue, as molecular weight markers and as a tood supplement. (11) and its binding partners are useful in medical imaging of sites expressing (11). (1) and (11) are useful for treating the contraction of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The polypoptide and polynocievide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess blodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pet_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and to produce of her types of data and products dependent on DHA and amine acid sequences. ANGONO10-ARCA0377 represent novel human diagnostic amine acid sequences of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           0; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated polynucleotide and encoded polypoptides, useful in
diagnostics, forensics, gene mapping, identification of mutations
